DIRECTIONS FOR USE

DO NOT spray in the heat of the day or when the plant is under moisture stress. Use as fine of a spray mist as possible. DO NOT spray to the point of runoff. Allow 3-4 hours after application before sprinkler irrigating to avoid washing the product off. Shake well and/or agitate before use.

Recommended mixing sequence: Adjuvants, pesticides, FBSciences nutrient products, other fertilizers, balance of water. When mixing with high phosphate fertilizers, add a citric acid buffer until the pH is 4.5 to 5.0 to improve compatibility and uptake. Ensure agitation is available when mixing with calcium fertilizers. DO NOT mix with crop oil concentrates without first consulting your local agronomist. A standard jar test is recommended before tank mixing.
